LeisureLine™ Cubicles by ALM - The only choice for the serious leisure operator, cost effective, low maintenance, long-life span (in excess of ten years) and above all good looks.

The LeisureLine™ cubicle system from ALM integrates high strength 50mm diameter extruded alloy posts, a heavy duty aluminium top rail and virtually indestructible 13mm thick compact laminate panels to produce the strongest cubicle possible.

This tried and proven system is fitted throughout the UK and Eire in leisure centres and pools and provides its operators with 100% reliability.

Key features of LeisureLine™

- Designed and tested to exceed ten years continuous use.
- The aluminium fully framed design provides a very rigid system able to cope with the excessive knocks and bangs associated with the leisure environment.
- Where possible, all fixings are hidden to deter vandals.
- HM Prison approved security screws fix the panels to the posts.
- All materials and fixings are non ferrous to prevent corrosion and unsightly rust marks appearing.
- The door mounting is designed to provide quick and easy access into the cubicle in case of emergency where the user has collapsed against the door.
- Aerospace materials are used to make the full length hinge which wraps round the door edge allowing on site adjustments.
- Heavy duty aluminium top rail and corner castings contribute to the outstanding strength of this system.
- Stylish easy to operate thumb turn indicator bolt with spherical profile face plate. Once fitted all fixings are hidden to prevent removal by vandals.
- Optional unique security emergency release facility (replaces coin operated).
- Stainless steel strike plate to prevent damage to the clashing post by constant abuse.

1 Indicator Bolt

Design led to provide a smooth thumb turn action and incorporating a spherical profiled face plate, this indicator ticks all the boxes.

Hidden screws to prevent vandalism. Coin operated emergency release or optional security emergency release.

Stainless steel stiker plate to prevent damage to the paintwork.

Full length buffer strip to reduce noise and prevent damage to doors.

1

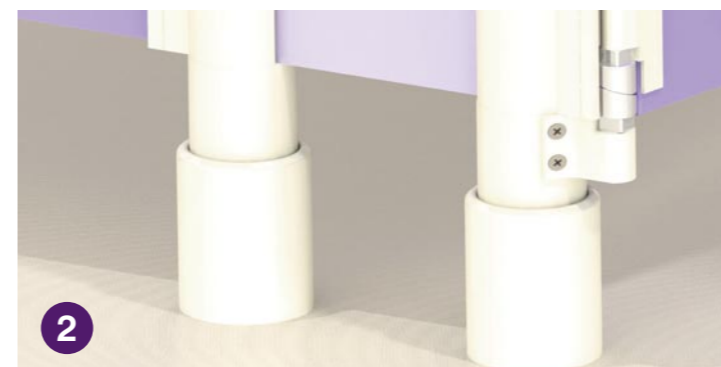

1a

1a Optional 'No Mischief Key'
 - Restricted Use Emergency Access Key. When access is required, the key is simply fitted to the protruding spigot on the face plate and turned to release the lock.

2 Hinge

Doors are encapsulated by a full length hinge providing additional rigidity and allowing doors to be trimmed on site to accommodate site changes. Using aerospace grade material, the special cams are designed to provide years of trouble free operation and allow the door to fall open or closed. A key feature of the hinge is the 'anti finger trap' design which prevents injury to young children.

LeisureLine™

3

3 Headrail

Maximum rigidity is achieved using a substantial top rail to run the entire length of the cubicle. For corner or island configurations, an integral cast aluminium corner connector ensures a continuous joint back to the wall. Once fitted, a rubber infill strip seals the top of the section to prevent the ingress of water and dirt.

4 Posts

50mm diameter extruded alloy posts are used to encapsulate the vertical edges of all panels. An integral fully adjustable foot allows uneven or sloping floors to be easily accommodated.

4

5 Finishes

The aluminium sections and components are subjected to a three stage pre-treatment process prior to powder coating guaranteeing a durable and long life finish. Coatings are carried out to ISO 9001. Most colours are available to match or contrast with the panels or surrounding décor.
